cView

Report viewer

View your reports on PCs without installing Crystal Reports software

Save money

If users simply need to run or view reports created by others, you do not need to install the Crystal Reports software on their PCs.

Save time

cView can be installed as the default viewer for users who wish to view Crystal Reports designed by others. It includes all the Crystal Report run time files

Easy to Use

If your users are comfortable using "File/Open" in other programs they have all the instructions they need to use all the features in cView. They find the Crystal Report and process it live against the database. For users who want even less interaction, cView can be set up to run their favourite report by clicking a desktop icon.

Interactive Reports

If a report uses parameters, cView will prompt the user with the questions and allow them to select answers from pick lists.

cView supports all parameter types including multi-value, range and multi-value/range.

Extra output flexibility

A viewed report can then be exported to other formats including PDF, Excel, Word, XML, csv etc. The results can be printed, emailed or saved in a disk folder.

Easy to control

You manage a folder of reports and use the local network security to decide who can view which reports.

Safe and Secure

Central control of database logon and security, to reduce opportunity to look at unauthorized data. The user can run reports without needing to know the database password.

Cost Effective

For a single user, a very cost effective report delivery solution. Volume discounts and Site or Global licenses available on request
